Public Health: Workforce Needs

The government public health workforce is understaffed

- Current estimates: at least 100,000 workers to ensure core functions
- Some 50% of government public health workers intend to leave their job

The U.S. government is investing to re-build the public health workforce

- The American Rescue Plan allocated \$7 billion to help hire and train public health workers

There are opportunities to build skills among current public health workers

- 86% of government public health workers don't have formal public health training
- >54% of government public health workers identify areas for training

Role of Schools and Programs of Public Health?

*Have Schools and
Programs of Public Health
Shifted their*

*MPH Programs
to*

*Help Develop the Public
Health Workforce of the
Future?*

If so, How? Why?

MPH Programs are Focused on Practice

- Primary focus should be to train public health practitioners (>86%)

Themes:

- *Students understand the core public health values, such as equity and social justice.*
- *Students can “tackle the world’s problems”.*

“The MPH is a professional degree. You should look to come out of the degree with a set of marketable skills that you can use across a whole range of industries.” (MPH 4)

“[Our focus is] making sure the students are getting critical skills that they can apply immediately... We teach a lot of [tools and skills] so that when they're in that situation, they will have those tools in their back pocket.” (MPH 7)

MPH Programs Have Shifted

- 96% of MPH programs focus on practice; 52% have shifted towards this since 2015
 - 82% have shifted to focus on key public health competencies
 - 45% have made changes to admissions requirements
 - 88% have made changes to courses, course content

MPH Curriculum Focus

MPH Programs Have Shifted

→ Content Areas Where MPH Programs are Reinforcing Curriculum

“There were five different areas of public health... now there is like a million and every time we turn around there is something else. We need to be prepared to react to new challenges... We need to teach flexibility, innovation. It's like partnerships, the humility to share and to talk to other people and to lean on other experts.” (MPH 3)

“We have some classes that were created within the past couple of years to meet some of those other competencies that were not being covered. I mean communication. Leadership. There was no leadership in our curriculum. No advocacy.” (MPH 2)

Motivations for Shifts

“[Our graduates need to] be prepared for anything and everything that comes up in public health. And at this point, I cannot even imagine what the next challenge will be. The [public health] challenges are huge and we have to collaborate. It's almost like there has to be an MPH in every organization.” (MPH 3)

“[We are] training future public health practitioners... folks who will get out there and work in public health and ultimately make a difference and move the needle on population health.” (MPH 8)

Factors Informing Shifts

- MPH programs are shifting based on real-world input
 - Accreditation standards
 - Employer, collaborator, external input
 - Research, publications

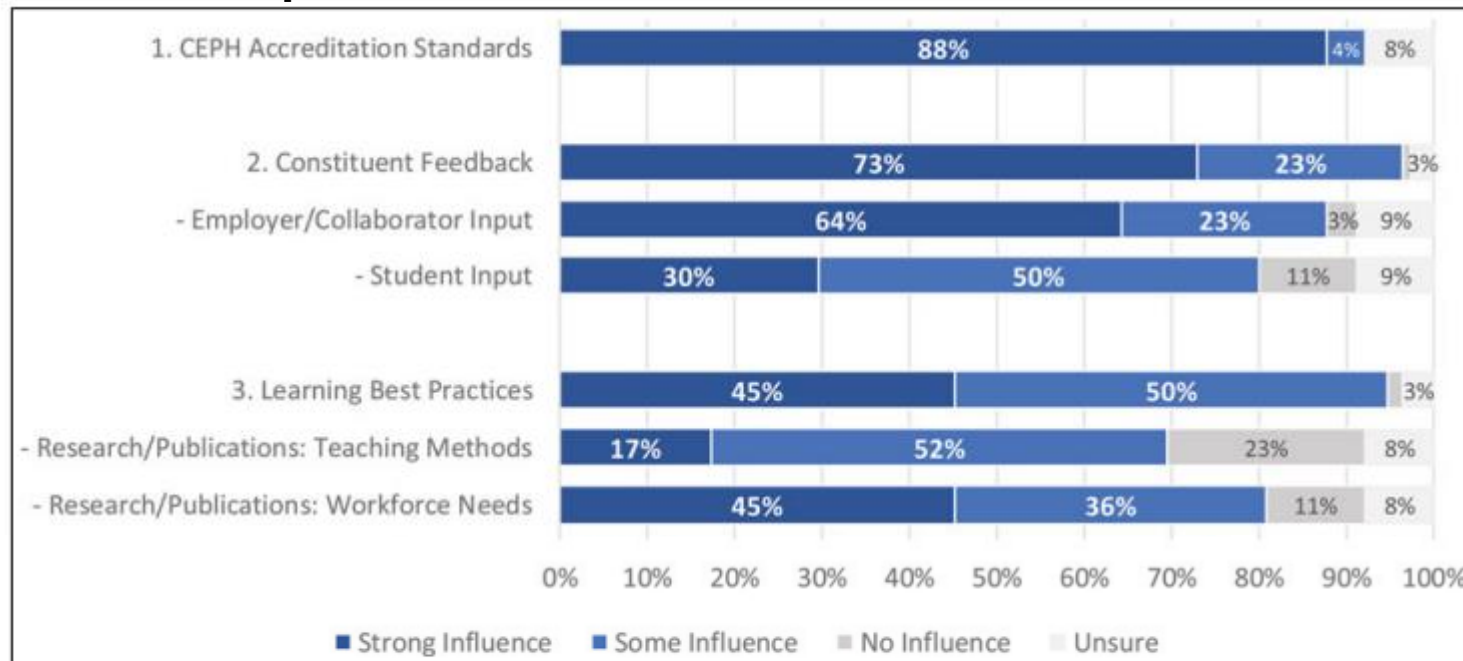

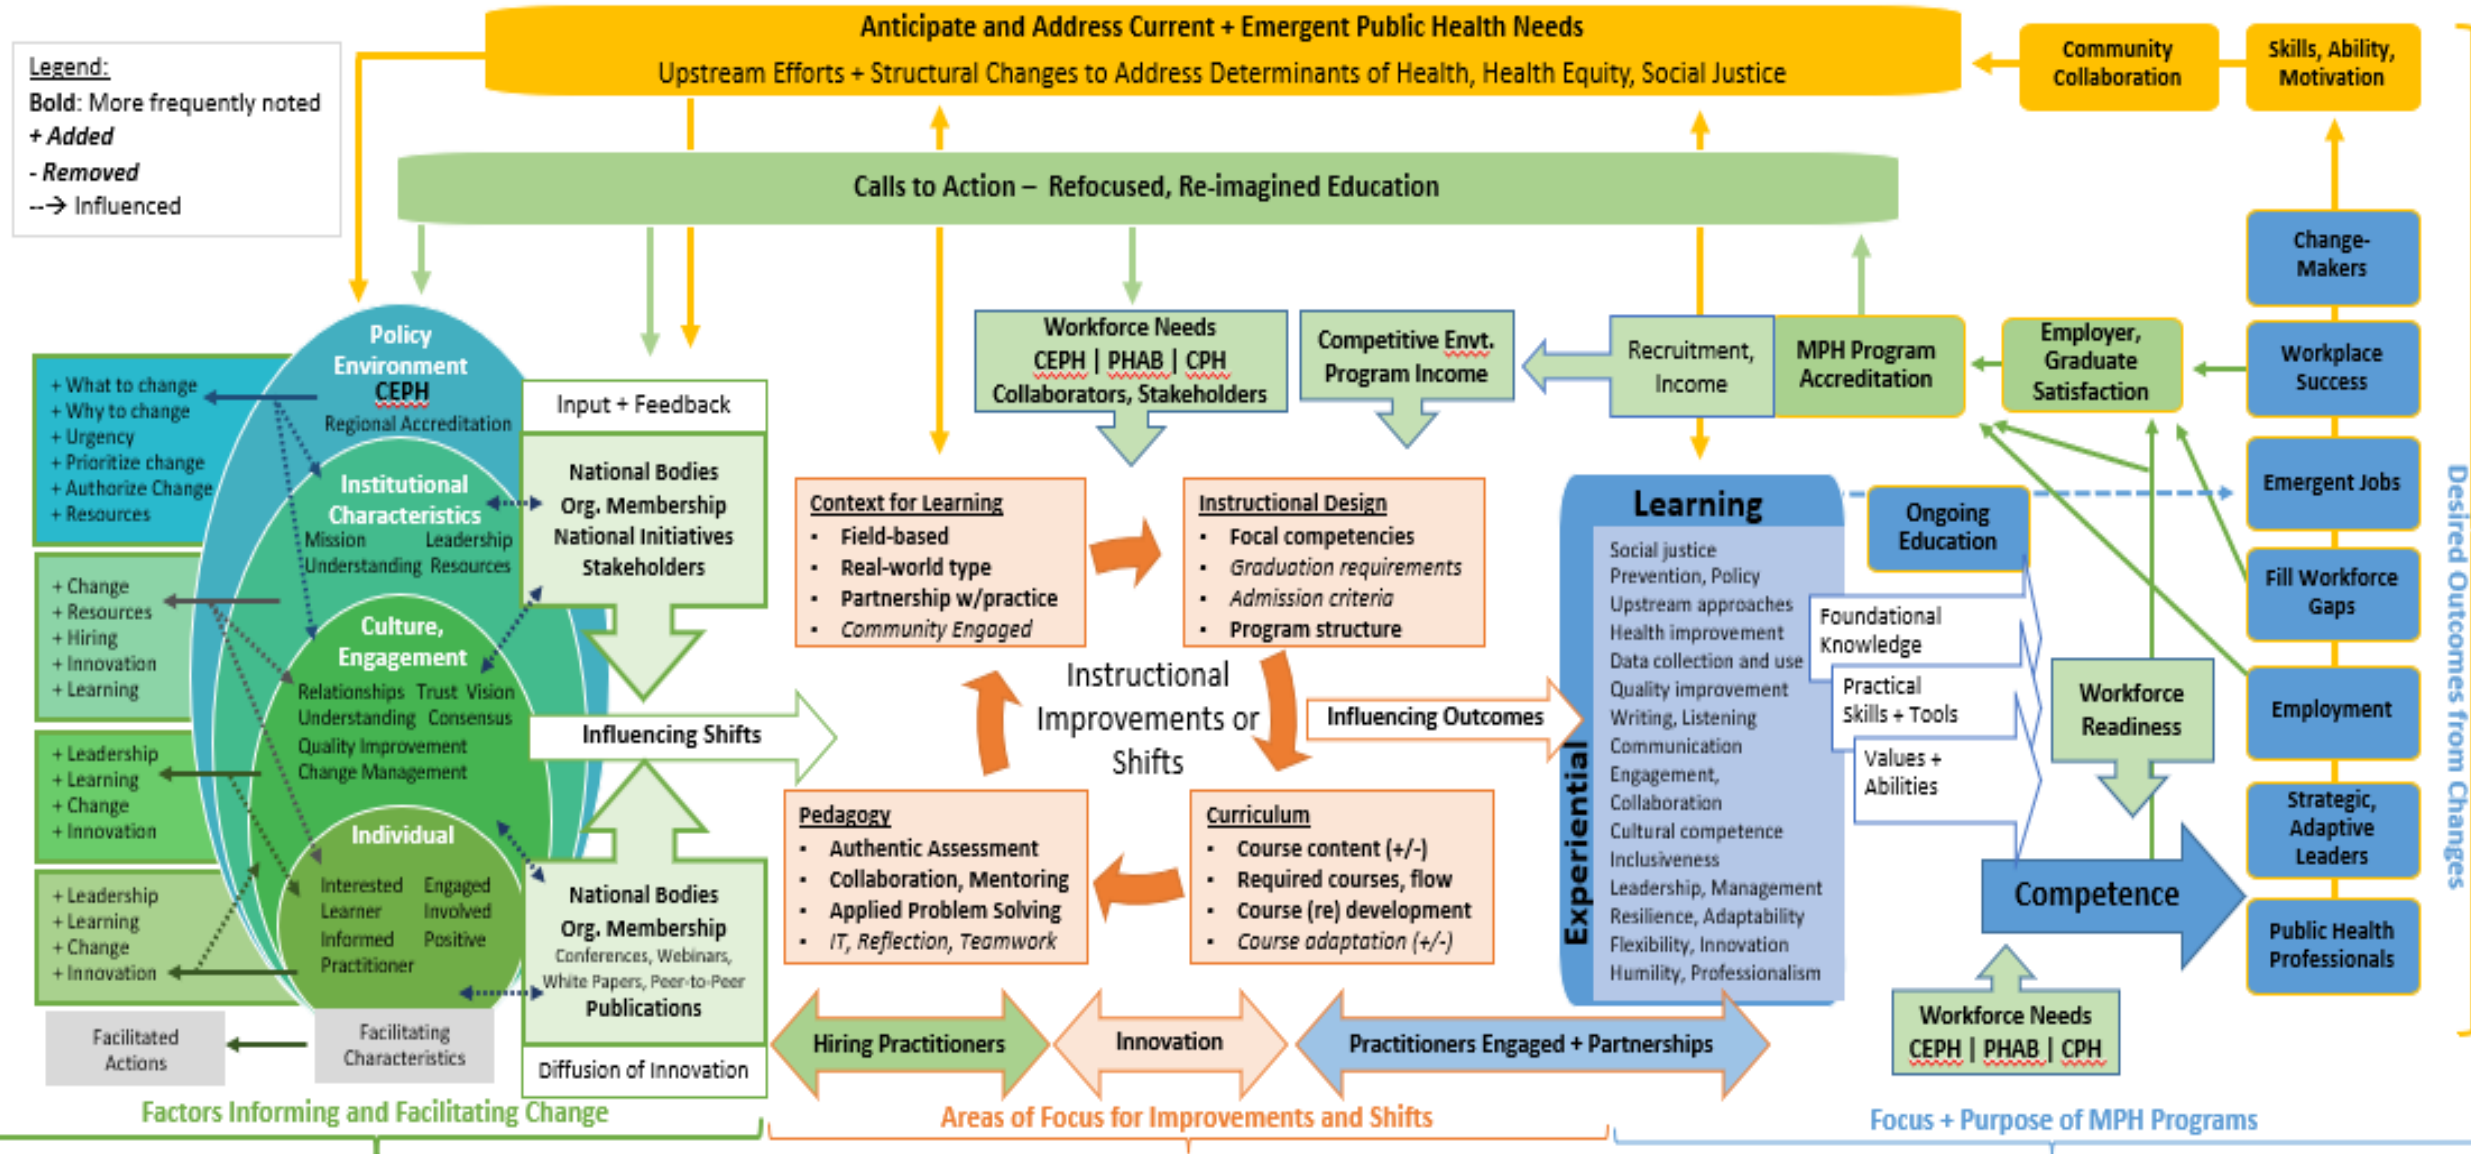

FIGURE 1 Reported Degree of Influence of Various Factors on MPH Program Changes; % of Survey Respondents (N = 115) Reporting Degree of Influence

Summary of Findings

Legend:
Bold: More frequently noted
+ Added
- Removed
--> Influenced

Summary of Findings

- **30 years ago, public health leaders started to raise an alarm. In the last 10 years, change has begun**

National Public Health Initiatives

- Elucidated workforce needs
- Defined competencies
- Set a new vision for public health
- Seeded the changes
- The processes used have supported changes

MPH Programs

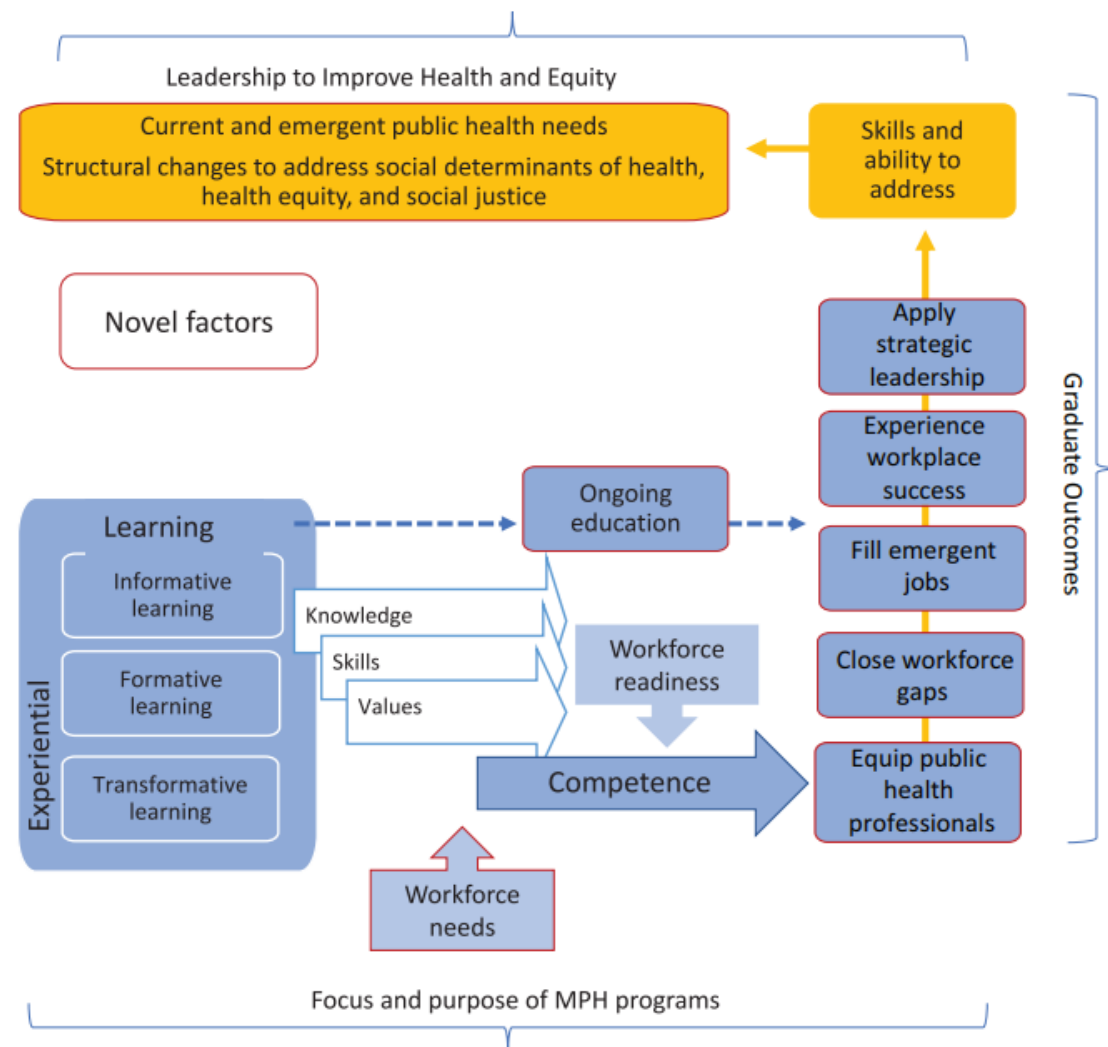

- Developing public health workforce
- Improving community health
- Curriculum aligned with areas of need (workforce, community)
- Improving student learning; supports for success

- **With engagement, MPH Programs can drive public health systems change + community health improvement**

Summary of Findings

- Building competence
- Workforce readiness
- Ability to listen, engage, lead
- Improve health equity

Opportunities + Innovations Amidst COVID-19

- Surge workforce, pipelines
- Funding for new workers
- New approaches to work

Preparing the Workforce to Prevent, Detect, Respond

■ New York State Public Health Corps

- 1 year fellowship
- 14-weeks of online applied learning
- 53 performance outcomes
 - Spark awareness
 - Common language, tools, approach
 - Foster engagement, collaboration

■ 400 Fellows (of 1,000)

Preparing the Workforce to Prevent, Detect, Respond

■ New York State Citizen Public Health Leaders

**NY STATE
CITIZEN PUBLIC
HEALTH LEADER**

- 8-hour training + Keynotes
- 20 Calls to Action
 - Build health literacy
 - Develop awareness
 - Stoke agency
 - Provide queues to action

■ 20,000 learners (of 100,000)

Preparing the Workforce to Prevent, Detect, Respond

■ National Cooperative Extension Collaboration [USDA]

— COOPERATIVE —
EXTENSION

- 20-weeks of online applied learning
 - Periodic live sessions
 - +/- Learning communities
 - 50 performance outcomes
 - Spark awareness, recognition
 - Common language, tools, approach
 - Foster engagement, collaboration
- 100 Adult learners

Preparing the Workforce to Prevent, Detect, Respond
