GOVERNOR HOCHUL ANNOUNCEMENTS:

December 12th: GOVERNOR HOCHUL UPDATES NEW YORKERS ON STATE'S PROGRESS COMBATING COVID-19

Governor Encourages New Yorkers to Keep Using the Tools to Protect Against and Treat COVID-19: Vaccines, Boosters, Testing, and Treatment

Governor Kathy Hochul today updated New Yorkers on the state's progress combatting COVID-19 and outlined basic steps they can take to protect against the spread of viral respiratory infections that become more common in the fall and winter seasons.

"As respiratory illnesses, the flu, and COVID-19 spread throughout our state, I urge all New Yorkers to remain vigilant and continue to use all available tools to keep themselves, their loved ones and their communities safe and healthy," **Governor Hochul said.** "Stay up to date on vaccine doses, and test before gatherings or travel this holiday season. If you test positive, talk to your doctor about potential treatment options."

Governor Hochul is [urging](#) New Yorkers to take common prevention measures — like staying up to date on vaccines and practicing proper hygiene — to protect from Respiratory Syncytial Virus (RSV), the flu and COVID-19 and reduce the patient burden on local hospitals. Last week, the Governor [updated](#) New Yorkers on the state's winter health preparedness efforts.

Last week, the U.S. Food and Drug Administration and CDC also cleared the way for [children six months of age and older](#) to receive the bivalent booster shot to increase protection against COVID-19. Previously, these shots were only available to [children ages 5 and older](#).

The New York State Department of Health issued a [new report](#) last week showing a 64 percent week-over-week jump in lab-confirmed flu cases across New York and week-over-week hospitalizations up 58 percent. Cases of influenza have now been detected in all 62 counties across the state, highlighting the need for New Yorkers to take steps and precautions that will reduce the risk of severe illness for children and adults.

Governor Hochul previously launched a [public awareness campaign](#) featuring New York State Health Commissioner Dr. Mary T. Bassett speaking directly to New Yorkers about the three viruses now circulating in the state with similar symptoms and the potential to cause serious illness. Produced by the New York State Department of Health, the videos include a [short clip](#) and a [longer version](#) geared toward parents; and a version aimed specifically at [health care providers](#).

The Governor also asked New Yorkers to get their bivalent COVID-19 vaccine boosters. To schedule an appointment for a booster, New Yorkers should contact their local pharmacy, county health department, or healthcare provider; visit [vaccines.gov](#); text their ZIP code to 438829, or call 1-800-232-0233 to find nearby locations.

In addition, Governor Hochul encourages New Yorkers to get their annual flu vaccine as [flu season is widespread](#) across New York State. The flu virus and the virus that causes COVID-19 are both circulating, so getting vaccinated against both is the best way to stay healthy and to avoid added stress to the health care system.

The State Department of Health is continuing its [annual public education campaign](#), reminding adults and parents to get both flu and COVID-19 shots for themselves and children 6 months and older. Advertisements in both English and Spanish language began running last month.

For information about flu vaccine clinics, [contact the local health department](#) or visit [vaccines.gov/find-vaccines/](#).

###

The [COVID-19 Vaccine Tracker Dashboard](#) is available to update New Yorkers on the distribution of the COVID-19 vaccine. The New York State Department of Health requires vaccinating facilities to report all COVID-19 vaccine administration data within 24 hours; the vaccine administration data on the dashboard is updated daily to reflect the most up-to-date metrics in the state's vaccination effort. New York State Department of Health-reported data from NYSIIS and CIR differs slightly from federally reported data, which is inclusive of federally administered doses and other minor differences. Both numbers are included in the release above.

New Yorkers looking to schedule vaccine appointments for 5-11-year-old children are encouraged to contact their child's pediatrician, family physician, county health departments, Federally Qualified Health Centers (FQHCs), rural health centers, or pharmacies that may be administering the vaccine for this age group. Parents and guardians can visit [vaccines.gov](https://www.vaccines.gov), text their ZIP code to 438829, or call 1-800-232-0233 to find nearby locations. Make sure that the provider offers the Pfizer-BioNTech COVID-19 vaccine, as the other COVID-19 vaccines are not yet authorized for this age group.

Visit our [website](#) for parents and guardians for new information, frequently asked questions and answers, and resources specifically designed for parents and guardians of this age group.

-###-

STATE DEPARTMENT OF HEALTH ANNOUNCEMENTS:

December 9th: New York State Department of Health Warns New Yorkers About Prevalence of Fentanyl in Opioids, Cocaine, and other Illicit Drugs

With End of Year Gatherings and Celebrations, New Yorkers Urged to Be Safe, Understand Signs of Overdose, and Take Advantage of Life Saving Medication

Standing Order Makes Life-Saving Naloxone Medication Available to New Yorkers Without a Prescription; State to Purchase Narcan for Opioid Overdose Prevention Programs Outside of NYC

ALBANY, N.Y. (December 9, 2022) – The New York State Department of Health urges New Yorkers to understand the risks associated with illicit drug use, as deadly fentanyl continues to be found in a wide variety of drugs, including heroin, cocaine, methamphetamine and illicitly manufactured pills, some of which are meant to mimic benzodiazepines, Molly/MDMA and prescription pain killers.

“Fentanyl has made street drugs far more dangerous. Even casual or occasional drug use can result in an overdose or death,” **State Health Commissioner Dr. Mary T. Bassett** said. “We all need to be able to recognize an overdose and have access to naloxone, the medication which reverses opioid overdoses and saves lives. I carry naloxone with me in case I come upon someone who needs it, and anyone with a loved one they are concerned about being exposed to Fentanyl should consider doing the same.”

Fentanyl is 50-100 times stronger than heroin and has contributed to an increase in opioid overdose deaths in recent years. Most overdose deaths in New York State now involve fentanyl. The Department is also warning the public about the presence in the drug supply of xylazine, a powerful animal sedative that can contribute to overdoses, particularly when it is combined with fentanyl or other opioids.

The Department continues to alert the public to these dangers through social media messages and other outlets, encouraging New Yorkers to recognize the signs of overdose and to take advantage of the resources available through the [Opioid Overdose Prevention Program](#).

Opioid overdose signs include unresponsiveness; unconsciousness; slow, shallow, irregular or absent breathing; and bluish color to lips or fingernails. The signs for an overdose from methamphetamine or cocaine include agitation, chest pain, irregular or stopped heart, high body temperature and seizure.

Among the steps taken by the Department to address the growing opioid overdose crisis is [a statewide pharmacy standing order for naloxone](#), making it easy for anyone to obtain this life-saving medication without prescription. Naloxone is easily administered—generally with a spray up the nose—and blocks the effects of opioids allowing a stricken person to resume normal breathing. Through the State Health Department's [Naloxone Co-payment Assistance Program \(N-CAP\)](#), insured individuals have co-payments of up to \$40.00 covered by the State resulting in no cost or lower out-of-pocket expenses for most people.

In November, the Department entered into a five-year contract for the purchase of Narcan™, a naloxone nasal spray which will be provided at no cost to Opioid Overdose Prevention Programs (OOPPs) registered with NYSDOH and located outside of New York City. The New York City Department of Health and Mental Hygiene furnishes naloxone to OOPPs within NYC.

The OOPPs train non-medical individuals in overdose recognition and response, with that response including the administration of naloxone. The public can find an OOPP near them by going to this [directory site](#). Some programs have scheduled trainings which may be found at on this [calendar](#). Some OOPPs—including all of the State's Syringe Exchange Programs—supply test strips which may be used to identify the presence of fentanyl.

The State is about to significantly enhance overdose preparedness on college and university campuses through legislation recently signed by Governor Hochul. The new law will require public colleges in New York to maintain a supply of naloxone available to Resident Assistants, all of whom will be trained in its use.

Anyone encountering an overdose should call 911, whether they have naloxone or not, as an overdose is a medical emergency.

Individuals who have naloxone should administer it as soon as possible, consistent with the manufacturer's guidelines as well as these simple instructions: [How to Use Narcan Nasal Spray for an Opioid Overdose](#).

Individuals who use opioids or other substances are also encouraged to create a safety plan, such as one developed by the Department ([English](#), [Spanish](#)).

New Yorkers looking for support with their substance use, or whose loved ones are seeking help, can find help and hope by calling the State's toll-free, 24-hour, 7-day-a-week HOPEline at 1-877-8-HOPENY (1-877-846-7369) or by texting HOPENY (Short Code 467369).

-###-

NYSDOH ANNOUNCEMENTS: BRFSS Reports

The Behavioral Risk Factor Surveillance System (BRFSS) is an annual telephone survey of adults developed by the Centers for Disease Control and Prevention conducted in all 50 States, the District

of Columbia, and several US Territories. The New York BRFSS is administered by the New York State Department of Health to provide statewide and regional information on behaviors, risk factors, and use of preventive health services related to the leading causes of chronic and infectious diseases, disability, injury, and death. Data from the BRFSS are useful for planning, initiating, and supporting health promotion and disease prevention programs at the state and federal level, and monitoring progress toward achieving health objectives for the state and nation.

November 14th: NYSDOH BRFSS report brief: “[The Prevalence of Diagnosed Prediabetes and Testing for High Blood Sugar, New York State Adults, 2020](#)” provides updated prevalence estimates of diagnosed prediabetes in the state. According to the report:

- An estimated 1.5 million adult New Yorkers (11.0%) have been diagnosed with prediabetes.
- Adults with obesity (19.2%) and overweight (11.0%) are significantly more likely to report being diagnosed with prediabetes compared to adults who have neither overweight nor obesity (5.9%).
- Diagnosed prediabetes is also more common among older adults, Black non-Hispanic adults, adults living with a disability, and adults living in New York City.
- The prevalence of diagnosed prediabetes is higher among adults who were tested for high blood sugar in the past 3 years (18.2%) than among those who were not tested in the past 3 years (4.7%).
- Younger adults and adults without health insurance coverage are less likely to have had blood sugar testing.
- Among adults over 45 years in age, 60.4% report having a test for high blood sugar or diabetes within the past three years, below the PA goal of 71.7%. Among low income (less than \$25,000) adults over 45 years in age, 60.4% report having had a test, below the PA goal of 67.4%.

ICYMI: November 10th: NYSDOH BRFSS report on [Veteran’s Health | NYS Adults, 2021](#) finds disabilities and some chronic health conditions are more common among veterans than non-veterans. To learn more about the Department’s programs for veterans, visit the [Veterans Health](#) page and [here](#) on the Department’s website.

ICYMI: October 12th: NYSDOH BRFSS report “[Breast Cancer Screening, New York State Adult Females, 2020](#)” presents data on estimated percent of populations with a breast cancer screening history aligning with recommendations of the United States Preventive Services Task Force (USPSTF).

ICYMI: September 15th: NYSDOH BRFSS report “[Diagnosed Diabetes, New York State Adults, 2020](#)” provides updated prevalence estimates of diagnosed diabetes in the state.

ICYMI: September 1st: NYSDOH BRFSS report “[Cannabis Use, New York State Adults, 2020](#)” provides new prevalence estimates of NYS adults who report using marijuana or cannabis in the past 30 days, the mode (or method) and reasons for use.

These briefs have been approved for public release. Please feel free to use and share this report and the data with your partners and colleagues.

Additional reports and resources are available on the NYSDOH Public Website:
<https://www.health.ny.gov/statistics/brfss/reports/>

Public Health Communications Collaborative (PHCC)

At-Home COVID-19 Testing Toolkit

Testing is one of our best tools to prevent the spread of COVID-19, alongside getting vaccinated and boosted. As we approach winter and the holiday season, our newest toolkit provides messaging guidance to help the public understand when to test and how to use at-home tests correctly. [The toolkit](#) includes graphics and sample social copy in English and Spanish to support your local outreach.

Our [Answers to Tough Questions](#) also help address questions about COVID-19 at-home antigen tests such as:

- When should I take a rapid at-home test?
- Why is repeat testing important?
- Are tests free? How do I get them?
